

Post Procedural Care for Microblading

- DO NOT TOUCH YOUR EYEBROWS for 3 days. Before you wash your eyebrows, hands must be washed with anti-bacterial soap.
- For at least two weeks, minimize exposure to the sun, discourage swimming;
- Properly cleanse the microblading area;
- Apply antibiotic ointment or cream;
- Use sterile bandage(s) or other sterile dressing(s) when necessary;
- The client shall consult a health care practitioner at the first sign of infection or an allergic reaction, and report any diagnosed infection, allergic reaction, or adverse reaction resulting from the microblading to the artist and to the Texas Department of State Health Services, Drugs and Medical Devices Group, at 1-888-839-6676.
- While healing, do not use any Retin-A, Glycolic Acids, Peroxide, Neosporin or any other products besides the ointment that was provided for you.
- Do not scrub or pick your eyebrows.
- Do not expose area to sun or tanning beds! Must use hat if in the sun.
- Avoid any beauty treatments such as facials, massages, lash extensions, swimming, whirlpools or sauna for 14 days.
- Avoid exercise and heavy sweating for the first 3-5 days.
- Do not allow heavy water pressure on your eyebrows for 14 days.
- No eyebrow waxing or threading for 14 days. Tweezers can be used.
- Must avoid makeup on and around brow area.
- Do not apply the ointment with fingers, please use Q-Tips; Also do not double dip the Q-tip.

FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN LOSS OF PIGMENTS.

WHAT TO EXPECT AFTER MICROBLADING OR EYEBROW SHADING PROCEDURES:

- You may have slight swelling, thickness, and/or redness for one or two days following the procedure.
- It is normal to lose approximately 1/3 of the color during the healing process.
- The first 3 days after the initial procedure, the color will be a shade too dark; 6 days later it will appear lighter, then after 10 days after the color will show more. Please be patient healing can take up to a month.
- It will appear softer when completely healed because the color will come from dermal layer of the skin to the epidermal layer of the skin.

The brows are approximately 30 to 40% darker and bolder in the width than they will be when healed. Your skin is red under the pigment which causes the color of the pigment to appear darker. There is some swelling, although difficult to actually see due to the thickness of the skin in the eyebrow area. This will subside. Exfoliation, which begins in a few days, will cause the excess pigment surrounding the eyebrow procedure to flake away and a narrower appearance of your eyebrows. Don't be concerned that your eyebrows initially appear darker and heavier in size than you desire. This is all part of the process.

You MUST WASH with a gentle cleanser and lukewarm water. Pat dry with tissue after washing the brows.
